

..... taking your business in higher trajectory through one stop solutions

Manufacturing

State-of-the-art manufacturing facility for electronics, electrical and mechanical components for Engineering Industries has got a list of satisfied customers. Apart from manufacturing engineering components as per client's design and drawings, we undertake manufacturing of new products which have been designed by us. This instills confidence in our clients about our engineering capabilities. We also manufacture various test stands, troubleshooting centers, mechanical jigs & fixtures and other customized products.

Medical Innovations

"No two human beings are the same and so how can we have implants of identical features for everybody" – we understand this requirement and our team of experts in collaborations of medical specialists are providing customized solutions for each individual. We have introduced the concept of LCC (life cycle costing) and have been able to quantify the miseries, a person undergoes due to improper implants and ultimate damage to body parts. General implants leave patients with different degrees of disabilities and sufferings.

We have been able to do this analysis successfully for dental implants and have capability to manufacture these implants on CNC (computer numeric controlled) machines and measure them on CMM (Co-ordinate measuring machines) to deliver implants of accurate dimensions.

Orthopedics is another field where our team of experts are working in close association with specialists for customizing orthopedics implants and artificial limbs for comfortable and zero disability life of patients.

We support our Specialists with suitable presentation along with animation in order to give maximum satisfaction to their patients.
