

..... taking your business in higher trajectory through one stop solutions

Special Purpose Machines

We have capability of designing, developing and manufacturing special purpose machines for industries like power plants ,defense , ordnance factories, railways, aeronautics, leather, pharmaceutical, food, etc. Machines developed by us for various industries by synergizing the expertise of mechatronics and experience of industry have given practically vertical start up to the end user. We provide productivity enhancement solutions together with a quality focus to enable you optimize the resources and reduce waste to build up your bottom line. We have solutions for imported machines which are passing through midlife crisis and hence demand higher maintenance attention and are likely to affect continuity of operations. Some examples are development of Precision Machine for turning of Center Pivots for Locomotives, light weight ,easy to assemble locomotive towing equipment,etc.

Plant Automation and Control

Blending of experience of experts from industries and knowledge of state-of-the art technological concepts from academicians, our dedicated and trained engineering team acts as the the core of customized plant automation and control solutions. We study the requirement of our clients , analyze , design and develop solutions with realistic Financial analysis. Design and Development of automatic coach and locomotive washing plant, automation of traction motor armature turning lathe , locomotive axle profile machining , axle box and bearing cleaning plant (bearing sizes above 150 mm inner dia),automatic railway equipment test plants ,etc.. are some of the plant automation works ,which have helped our customers in
